Introduction

HA-401 is an intercom host that supports security situation control, integrating functions related to message notifications, security alarms, community bulletins, interior environment control, visitor intercom, and push advertising. The HA-401 uses advanced automatic control, database software, computer network communication technology, and building message management, combined with a Smart Home system, to achieve intelligent indoor control.

The HA-401 provides support for a number of standard communication protocols, such as the Modbus RTU/ASCII and Modbus TCP protocols. When used in conjunction with 3rd-party software such as SCADA, or ERP, etc., the HA-401 is able to provide support for a range of smart phones. The phone can then be used to integrate with local or remote software to provide control functions for home lighting, air conditioning, television, electronic curtains, noise, and security alerts, delivering a more stylish and comfortable smart home experience based on science and technology.
