

Using DLL of ICPDAS I/O card in VB.Net

This document describes how to use the ICPDAS I/O card DLL file in a VB.Net application.

[DLL driver and demo file related information]

In the past, ICPDAS has provided the relevant DLL files for our various I/O cards for use in applications that were developed by our customers using Microsoft Visual C++, Visual Basic, Borland C++ builder and Delphi. By following the instructions in this document, it will be possible to use our DLL in a VB.NET application.

The following instructions will use the PIO-D48 add-on card in Win2000/XP as a demo. Before this issue, please install the DLL/OCX driver for Win2000/XP first. Download the pio_dio_win2k_v205.exe file from the ftp site:

ftp://ftp.icpdas.com.tw/pub/cd/iocard/pci/napdos/pci/pio-dio/dll_ocx/driver/

or from the attached CD path:

\\NAPDOS\PC\PIO-DIO\DLL_OCX\Driver\

After installing the DLL/OCX driver, select the suitable demo and download the existing VC sample program from the ftp site:

ftp://ftp.icpdas.com/pub/cd/iocard/pci/napdos/pci/pio-dio/dll_ocx/demo/

or from the attached CD path:

\\NAPDOS\PC\PIO-DIO\DLL_OCX\Demo\

The source code of Visual Basic 6.0 sample programs can then be copied, pasted and modified to VB.NET code.

[To modify from Visual Basic 6.0]

Download dll_vb6_XXXXXX.exe file from the ftp site:

ftp://ftp.icpdas.com/pub/cd/iocard/pci/napdos/pci/pio-dio/dll_ocx/demo/

or from the attached CD path:

\\NAPDOS\PC\PIO-DIO\DLL_OCX\Demo\

Extract the file to a local directory. Refer to the PIODIO.bas and the program structure of the old demo program to create your VB.Net project. Into your class, insert the name of the functions you will use in your application with "DllImport". For example, imagine an application has a class named PIODIO that will use a function called "PIODIO_InputByte" which is declared in the PIODIO.bas file.

To import

**Declare Function PIODIO_InputByte Lib "PIODIO.dll" _
(ByVal address As Long) As Integer**

into the class, insert the following two lines into your code:

```
<DllImport("Piodio.dll")> _  
    Public Shared Function PIODIO_InputByte(ByVal wBaseAddr As _  
        Integer) As Integer  
  
    End Function
```

Refer to

ftp://ftp.icpdas.com/pub/cd/iocard/pci/napdos/pci/pio-dio/manual/pio-dio_dll_software_manual_en.pdf

for more information about using ICPDAS functions.

After adding the above two lines, the function can be called in an application in the following manner:

```
InVal1 = cpiodio.PIODIO_InputByte((ushort)(wBaseAddr + 0xC0));  
InVal2 = cpiodio.PIODIO_InputByte((ushort)(wBaseAddr + 0xC4));  
InVal3 = cpiodio.PIODIO_InputByte((ushort)(wBaseAddr + 0xC8));
```

A details description of the procedure is as follows:

Step 1.

Start Visual Studio .Net and go to File->New ->Project. Refer to the following figure to create a new project.

Step 2.

Add the following lines at the start of the code.

```
Imports System  
Imports System.Drawing  
Imports System.Collections  
Imports System.ComponentModel  
Imports System.Windows.Forms  
Imports System.Data  
Imports System.Runtime.InteropServices  
Imports System.Threading
```

Step 3.

Import the function declaration from the PIODIO.bas into your code.

The function declarations in the original PIODIO.bas file:

```
Global Const PIODIO_NoError = 0
Global Const PIODIO_DriverOpenError = 1
Global Const PIODIO_DriverNoOpen = 2
Global Const PIODIO_GetDriverVersionError = 3
Global Const PIODIO_InstallIrqError = 4
Global Const PIODIO_ClearIntCountError = 5
Global Const PIODIO_GetIntCountError = 6
Global Const PIODIO_RegisterApcError = 7
Global Const PIODIO_RemoveIrqError = 8
Global Const PIODIO_FindBoardError = 9
Global Const PIODIO_ExceedBoardNumber = 10
Global Const PIODIO_ResetError = 11
Global Const PIODIO_IrqMaskError = 12
Global Const PIODIO_ActiveModeError = 13
Global Const PIODIO_GetActiveFlagError = 14
Global Const PIODIO_ActiveFlagEndOfQueue = 15

' define the interrupt signal source
Global Const PIOD144_P2C0 = 0 'pin29 of CN1(37 pin D-type, pin1 to pin37)
Global Const PIOD144_P2C1 = 1 'pin28 of CN1(37 pin D-type, pin1 to pin37)
Global Const PIOD144_P2C2 = 2 'pin27 of CN1(37 pin D-type, pin1 to pin37)

Integer)

```

```

End Sub

<DllImport("Piodio.dll")> _
Public Shared Function PIODIO_InputByte(ByVal wBaseAddr As Integer) As Integer
End Function

' *****
Public Sub OutputByte(ByVal wBaseAddr As Integer, ByVal bValue As Integer)
    PIODIO_OutputByte(wBaseAddr, bValue)
End Sub

Public Function InputByte(ByVal wBaseAddr As Integer) As Integer
    InputByte = PIODIO_InputByte(wBaseAddr)
End Function

' *****
Public Sub New() 'constructor
    DriverOpened = 0
End Sub

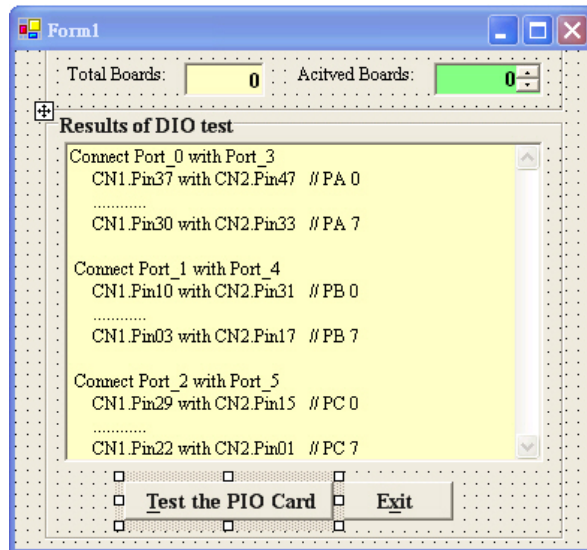

Protected Overrides Sub Finalize()
    If DriverOpened <> 0 Then
        DriverOpened = 0
        PIODIO_DriverClose()
    End If
    MyBase.Finalize()
End Sub
End Class

```

Step 4.

Designing your application and Using the DLL function in your application.

Designing the GUI:

Designing the GUI

Using the function:

Namespace PIODIO_D48

Public Class Form1

Inherits System.Windows.Forms.Form

#Region " Windows Form Designer generated code "

Public Sub New()

MyBase.New()

'This call is required by the Windows Form Designer.

InitializeComponent()

'Add any initialization after the InitializeComponent() call

End Sub

'Form overrides dispose to clean up the component list.

Protected Overloads Overrides Sub Dispose(ByVal disposing As Boolean)

If disposing Then

If Not (components Is Nothing) Then

components.Dispose()

End If

End If

MyBase.Dispose(disposing)

End Sub

'Required by the Windows Form Designer

```
Private components As System.ComponentModel.IContainer
```

```
'NOTE: The following procedure is required by the Windows Form Designer
```

```
'It can be modified using the Windows Form Designer.
```

```
'Do not modify it using the code editor.
```

```
Friend WithEvents groupBox2 As System.Windows.Forms.GroupBox
```

```
Friend WithEvents btnExit As System.Windows.Forms.Button
