## Introduction

The PIO-821LU/HU card is the new generation product that ICP DAS provides to meet RoHS compliance requirement. The new PIO-821LU/HU card is designed as a drop-in replacement for the PIO-821L/H, and users can replace the PIO-821L/H by the PIO-821LU/HU directly without software/driver modification.

The PIO-821LU/HU card is a high performance multifunction board for PC/AT compatible computers. They feature a 12-bit ADC and the maximum sampling rate of the A/D converter reaches up to about 45K samples/sec., 16 single-ended or 8 differential analog input channels, 12-bit DAC voltage output and 16 TTL-compatible digital input and digital output channels. The PIO-821L/LU provides for low gain (1, 2, 4, 8); and the PIO-821H/HU supports high gain (1, 10, 100, 1000).

The PIO-821LU/HU also adds a Card ID switch and pull-high/pull-low resistors for DI on board. Users can set Card ID on a board and recognize the board by the ID via software when using two or more PIO-821LU/HU cards in one computer. The pull-high/ pull-low resistors allow the DI status to be specified when the DI channels are unconnected; the DI status will remain in high or low status other than floating.
